

Your chosen cell: Red blood cell.

If you choose to upload a video file to Teams, try to keep recordings to less than 4 minutes.

My plan. I will be making what it looks like inside blood. to do this i will be making miniature clay models of red blood cells and placing them on a red sheet .

Step 1- Get all my equipment and tools (Red clay. Red paint, paint brush , cardboard and a knife (need parents help)

Step 2- Next, I got my paintbrush , red paint and cardboard out to make the red background! . I just did a couple of red blobs and swooshed the paintbrush back and forth.

Step 3- In the meantime when I let the paint dry , i will be creating the main part of the model, to do this I got all my remaining equipment that I didn't use. Firstly, I got my parents to cut a few slices of the clay out so that i could create the red blood cells. I had to warm the clay up to get it to move and be able to create the cells. Once I warmed the clay up, I flattened it and used my fingers to create the hole effect. I repeated this 5 times and the project was done! Now all I needed to do was place the red blood cell models onto the now dry paint
